

Recopilar Archivos con Powershell

```
$inventario = foreach ($file in Get-ChildItem "C:\Users\Admin" -File -
Recurse) {

    [PSCustomObject]@{
        Name           = $file.Name
        Extension       = $file.Extension
        FullName        = $file.FullName
        SizeBytes       = $file.Length
        SizeMB          = [Math]::Round($file.Length / 1MB, 2)
        CreationTime    = $file.CreationTime
        LastWriteTime    = $file.LastWriteTime
        LastAccessTime  = $file.LastAccessTime
    }
}
$inventario | Where-Object { $_.SizeMB -gt 100 } | export-csv
.\resultados.csv
```
